

Iron Tree

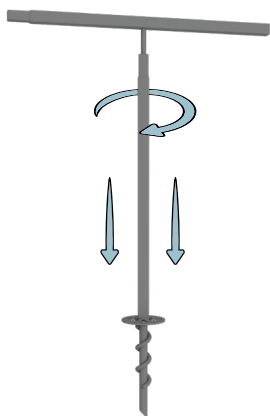

Versatile Pole System

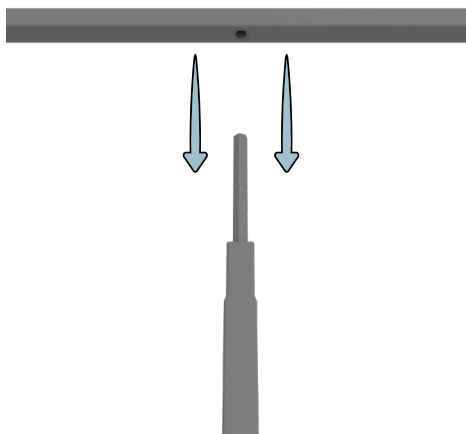

Step 1: Clear out small area with hand (debris, grass, etc.) and step pole into ground using plate and foot holder.

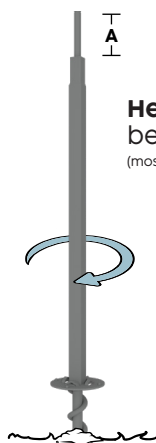

Step 3: Apply downward pressure and turn clockwise, slowly. Stop turning once the pole won't go any deeper or the bottom plate stops turning.

Step 2: Attach hex extension.

Step 4: Hand tighten the outer shell clockwise so the bottom plate snugs into the ground.

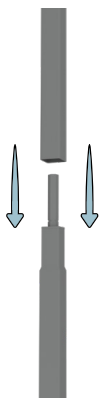

Height A should be between 1-8"
(most installations will be 1-3").

Iron Tree

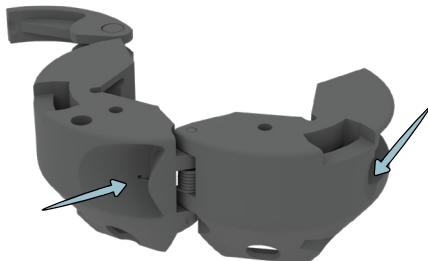

Versatile Pole System

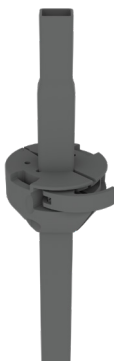

Step 5: Line the extension pole up to the base pole, and set it on top of it.

Step 6: Open the central hub by using the finger grabs to the right & left of the hinge.

Step 7: Keeping the hub open, place it on the pole at the desired height. Then release your grip. Secure by tightening the lock & pushing it into place.

Step 8: Add branches and a finial to your liking!

Maintenance tip:

Spray **WD-40** into the small hole at the top of the **in-ground anchor** once **every 6 months** to prevent it from locking up.
